-

Experience

WG Underground — Remote

Fullstack Developer

Feb 2023 – Oct 2024

- **Architected and deployed** a job management application, streamlining resource allocation and reporting workflows for WG Underground's construction operations, improving efficiency and receiving positive user feedback.
- **Developed** a cross-platform mobile app (React Native) and an admin web portal (React) to enable real-time job tracking and resource planning.
- **Built and integrated** backend services with Java and Spring Boot, leveraging Spring Security for robust, role-based authentication and seamless API integration across applications.

Macy's - Revature — Remote
Fullstack Developer
Mar 2021 – Oct 2022

- **Engineered high-performance Java microservices** to optimize system scalability and improve response times, significantly enhancing processing efficiency.
 - **Developed responsive web and mobile UIs** using React, streamlining the warehouse management interface and improving usability for the operations team.
 - **Led** the integration of data synchronization systems between on-premises and cloud databases, enhancing data accessibility and reducing errors.
-

Leadership & Entrepreneurship

Seta Solutions
Founder & Fullstack Developer
Nov 2022 – Current

- Founded Seta Solutions to develop custom software, including PetPilot, a management system for veterinary practices. This SaaS platform improved data accuracy and clinic operations for users.
 - **Implemented AI features** in PetPilot for intelligent scheduling and client communication, which reduced no-show appointments by 15%.
 - Managed end-to-end product lifecycle for client solutions, from requirements gathering to deployment and ongoing support.
-

Education

Georgia Gwinnett College — Lawrenceville, GA
Bachelor of Science in Information Technology, Software Development
Graduated 2020

Notable Projects

- **PetPilot** (Seta Solutions): Developed a web-based veterinary management system with AI capabilities, improving client communication and workflow automation.
- **Warehouse Management Interface** (Macy's): Contributed to a responsive UI and led the design of microservices supporting cross-location data management.
- **Construction Job Management Platform** (WG Underground): Created a real-time tracking app for field operators and administrators, improving job data accuracy and resource allocation.
