Professional Summary

Fullstack Developer with two years of experience building and maintaining scalable web and mobile applications, specializing in Java and React. Experienced in driving efficiency and optimizing system architectures, with expertise in microservices, secure user authentication, and agile development practices. Proven ability to lead projects from conception to deployment, bringing impactful solutions to industries including retail, construction, and veterinary services.

Experience

WG Underground   *Remote*
Java Developer   *Atlanta, GA*

- Streamlined job workflows and reporting systems for field operators and administrators, significantly reducing reliance on manual processes and improving productivity.
- Enhanced data flow accuracy and user experience by ensuring seamless integration between web and mobile apps through secure API design.
- Developed and deployed backend services using Java and Spring Boot, implementing role-based authentication with Spring Security to ensure secure and reliable operations.

Macy's - Revature   *Remote*
Fullstack Developer   *Atlanta, GA*

- Engineered high-performance Java microservices to support scalable operations and improve response times across warehouse management systems.
- Designed and implemented responsive web and mobile UIs using React, improving usability and efficiency for warehouse operations teams.
- Facilitated seamless data synchronization between on-premises and cloud databases, improving data accessibility and reducing synchronization challenges.

Education

Georgia Gwinnett College — Lawrenceville, GA
Bachelor of Science in Information Technology, Software Development
Graduated 2020

Google Project Management Certificate
Focused on Agile methodologies, risk management, and effective project delivery
Completed 2024

Technical Skills

- **Backend**: Java, Spring Boot, Spring Security, RESTful APIs, SQL, Kafka, JUnit, PostgreSQL, Python, OpenAI API
- **Frontend**: React, React Native, Expo, HTML, CSS, Cypress, Selenium
- **Tools & Version Control**: Git, Docker, CI/CD, AWS S3, EC2
- **Languages**: English, Spanish

Freelance Technology Consultant

Seta Solutions
Founder & Developer

- Developed **PetPilot**, a SaaS veterinary management tool, leveraging AI for smarter scheduling and enhanced client communication.
- Automated manual business workflows, including inventory systems, improving operational efficiency and accuracy for clients.
- Designed and delivered user-friendly e-commerce websites, increasing client engagement and online sales.
- Built secure, scalable backend systems with Java and Spring Boot, paired with modern, intuitive frontend designs using React.
- Led end-to-end project lifecycles, applying problem-solving and project management skills to meet diverse client needs.

Notable Projects

- **Warehouse Management Interface** (Macy's): Contributed to a responsive UI and led the design of microservices supporting cross-location data management.
- **Construction Job Management Platform** (WG Underground): Created a real-time tracking app for field operators and administrators, improving job data accuracy and resource allocation.
- **PetPilot** (Seta Solutions): Developed a web-based veterinary management system with AI capabilities, improving client communication and workflow automation.
